Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using the counter method.

```
void function (int n)
{
    int i= 1;
```

```
    int s =1;
```

```
    while(s <= n)
    {
         i++;
         s += i;
     }
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

For example:

Input	Result
9	12

Answer: (penalty regime: 0 %)

```c
#include <stdio.h>

void function(int n) {
    int c = 0;
    int i = 1;
    int s = 1;

    c++;
    c++;

    while(s <= n)
    {
        i++;
        c++;

        c++;
        c++;
        s += i;
    }

    c++;

    printf("%d", c);
}

int main() {
    int n;

    scanf("%d", &n);

    if (n > 0) {
        function(n);
    }

    return 0;
}
```
